

FLEXIBLE • CUSTOMIZABLE • AFFORDABLE

Mental Health Software

EHR, scheduling, patient engagement, & billing software for mental health professionals to unified workflow for every role within the practice.

PRACTICE MANAGEMENT & BILLING

EHR designed exclusively for mental health is paired with our front office and billing tools in a practice management bundle to streamline many aspects of your administrative workflow. It's the automation across all our technologies that creates a unified workflow experience for every role of your behavioral medicine practice.

Behavioral health disorders, conditions & templates we support

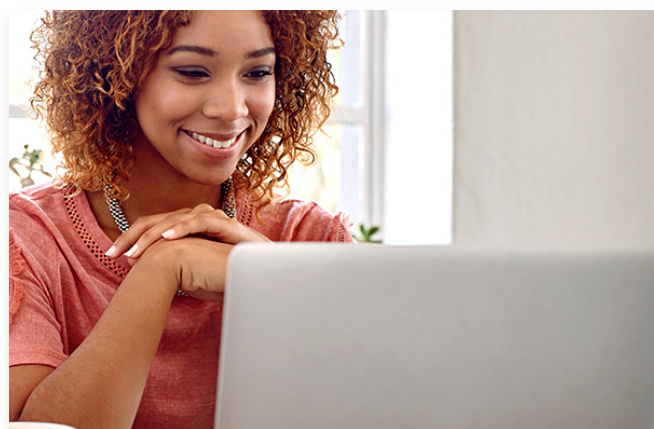

Our specific-disorder templates align with the APA (American Psychiatric Association) severity disorder measures. These EHR notes, sub notes and patient forms give the psychologist and psychiatrist the ability to assess, diagnose, develop treatment plans, monitor the severity of the disorder and document progress notes for a wide variety of disorders. For each of these disorders you have the ability to evaluate a patient using DSM-5 criteria for either an adult or child (11-17) population.

Specific-disorder Templates

- ☑ Depression (major depressive disorder)
- ☑ Separation anxiety disorder
- ☑ Risk assessment (self-harm, suicidal & homicidal ideation)
- ☑ Anxiety disorders (generalized & social anxiety)
- ☑ Substance abuse (outpatient drug & alcohol)
- ☑ Attention deficit hyperactivity disorder (ADHD)
- ☑ Autism spectrum disorder
- ☑ Specific phobia
- ☑ Panic disorder
- ☑ Agoraphobia
- ☑ Post-traumatic stress disorder (PTSD)
- ☑ Acute stress symptoms
- ☑ Dissociative symptoms
- ☑ Ideal for any multi-specialty practice with mental health providers

Quality Patient Experiences.

AdvancedPatient is designed to engage patients in their progress and recovery. Automate the paperwork hassles and offer self-service features to improve patient engagement and drive up satisfaction and retention.

EHR for Therapy.

Charting content is easily configurable, which also makes it easy to accommodate a wide variety of therapists, counselors and providers. You can even build your ideal workflow from scratch. If you ever need to create a custom subnote for a secondary complaint, we offer dozens of options. Enjoy the freedom to document on your iPhone, iPad, desktop & laptop.

A screenshot of the AdvancedPatient EHR interface. The top bar shows 'Patients Dashboard' and 'BERN, MARC John'. The left sidebar contains a patient profile for 'JONES, CAMERON, MD' and a list of medications including 'dextroamphetamine' and 'Percocet'. The main area displays a 'Psychiatric ROS, MSE, Musculoskeletal, and Constitutional Exams' form with various checkboxes for symptoms like 'Aggressive', 'Anxious', and 'Depressed'. The form is titled 'History of Present Illness' and includes a text area for the patient's history.

Complete Intake Forms Online.

Allow your patients to complete intake documentation in the privacy of their home – items like current symptoms, medical and psychiatric history, and structured clinical interview questions. AdvancedPatient gives you an online patient portal as well as an iPad app for in-office information capture. All patient responses auto-populate onto the clinician's template for use during the initial office visit or therapy session. This increases efficiency for nearly all members of your staff and patients.
