

SATISFY REGULATORY REQUIREMENTS. IMPROVE CARE COORDINATION. PRESCRIBE CONTROLLED SUBSTANCES SAFELY, RELIABLY & EFFICIENTLY.

Our EPCS software is designed to save time while safeguarding your practice with improved management of controlled substance prescriptions. It's fast, simple, and affordable with a high degree of control and visibility. You can prescribe securely, report to regulatory agencies, and meet Meaningful Use requirements — all without doing any extra work.

When you convert paper to electronic prescribing, processes are automated and security measures become systemized. All activities are tracked and available with detailed reporting. You get a full audit history including who signed, what drug was prescribed, dosage and number of refills (remaining), date and time, pharmacy, prescription status, and prescription history by provider.

EFFICIENT

Paperless workflow integrates with your EHR for easily maintaining and tracking full DEA audit histories.

INTUITIVE

The simple one-step process follows the same workflow you already know with our standard AdvancedMD electronic prescribing.

SECURE

Signoff security uses a personal token and passphrase to meet regulatory state and federal requirements.

PROTECT YOUR PATIENTS & BOLSTER YOUR PRACTICE.

AUDIT HISTORY

Maintain an electronic database of complete audit histories, including signer, drug prescribed, dosage and refills remaining, date and time, pharmacy, prescription status, and prescription history by provider.

ONE-CLICK ELECTRONIC SIGNING

With the entire process in one place, prescriptions can be signed with minimal effort even to remote providers with built-in messages features.

TWO-FACTOR AUTHENTICATION

Easily complete the DEA-required two-factor authentication with a personal passphrase and secure token.

PRESCRIPTION STATUS & SECURITY VALIDATION

Access prescription requests created by your clinical staff in one place to ensure all are reviewed and completed by authorized prescribers.

STATEWIDE PRESCRIPTION DRUG MONITORING

Check state compliance requirements and access prescription drug monitoring program (PDMP) data, including patients' entire controlled substance prescription history and key demographics.
