AdvancedMD

Hello donut.

We redefined the EHR category in 2010 with integrated physician-patient workflow, giving practices a unified way to manage patient data between clinical and billing systems with automatic data transfer.

For 2018 we've created a revolutionary new concept in EHR – a smart dashboard. The practice dashboard shows all your frequently-performed workflow elements in a single location for a remarkably convenient way to manage tasks with greater ease and speed.

It's like having a personal clinical analyst compiling your workflow into a real-time snapshot of your outstanding tasks. You get a visual representation of action items to help you know what to do next & stay abreast of critical items. Everything has been designed for physician workflow and any task-based clinical provider.

- Stay connected to the pulse of your practice by gauging work volume with prioritized to-do tasks.
- Complete tasks faster with minimal clicks so you can focus on what matters most.
- Alerts notify you of urgent issues such as abnormal lab results help you avoid critical oversights.
- Get a consolidated view of all the moving parts of your workflow wherever you happen to be.
- Visualize & drive actions on to-do items like never before.
- Prioritize outstanding items into actionable lists.
- Millions of transactions are compiled into easy-to-understand analytics.
- Access is controlled by role to help you manage what your staff is able to view.

A LIBRARY OF DONUTS HELPS PRIORITIZE HOW YOU MANAGE TASKS.

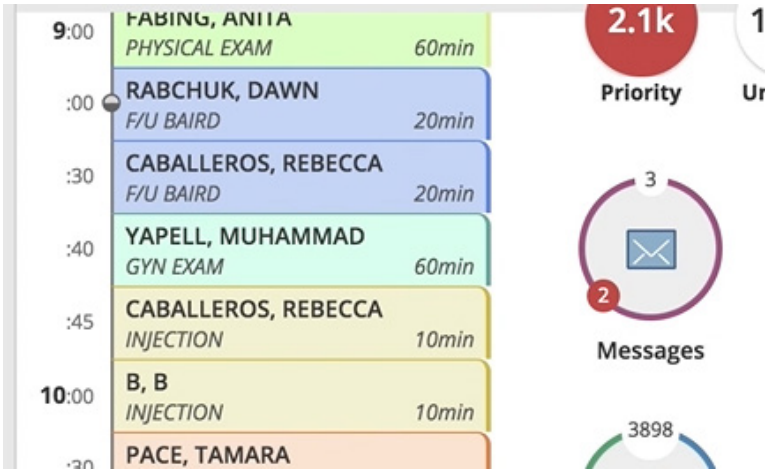
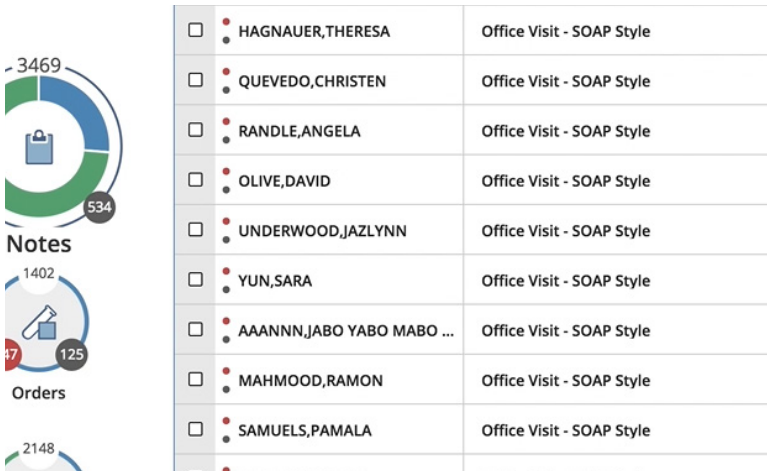
OUTSTANDING TASK DONUTS

Drill-down donuts are prioritized to your daily tasks. These visual, interactive graphs help you complete tasks faster with minimal clicks. They also display alerts for urgent issues – such as abnormal lab results – that can help physicians avoid critical oversights.

CONSOLIDATED SCHEDULE SNAPSHOT

There's an enhanced single-column schedule snapshot that gives you access to all your common tasks. You can capture charges, check patients in and out, mark a no-show and manage rooming.





PRIORITIZED IN-BOX

The majority of the screen's real estate is devoted to helping you get tasks done quickly. As you select donuts – such as labs, refills or messages – items are prominently displayed and prioritized in a familiar "in-box" layout.
