

## A SEAMLESS PRACTICE STARTS HERE.

INTEGRATE YOUR MEDICAL PRACTICE SYSTEMS FOR FLAWLESS DATA INTERCHANGE AND BETTER CONTINUITY OF CARE.

Today's electronic healthcare environment is rapidly evolving, producing all kinds of software and IT applications not necessarily designed to speak to each other. So it's not surprising that one of the most common workflow challenges we hear from providers is getting their various clinical and operational systems to connect.

With our unified interoperability, you get a combination of people, processes, and technology to ease the burden of connecting your disparate information systems. It's a dedicated integration solution that supports seamless data interchange, so you can finally turn your IT investments into even better patient outcomes and practice management efficiencies.

Interoperability allows your practice to easily and affordably connect with a broad range of systems. This includes the evergrowing array of partner applications and tools used by hospitals, HIEs, labs, insurance providers, state immunization registries, radiology centers, and other medical practices.

Our solution empowers clients, technology partners, and other business partners with a secure, self-service developer portal. The open API architecture lets you build your interface according to your practice's unique set of applications. In addition, the AdvancedMD professional services engineering team is available as an in-house resource dedicated to your support.

### **ROBUST**

Our combination of people, processes, and technology provides performance-boosting system integration built around your needs for easy connection to partner applications across the healthcare industry.

### **EFFICIENT**

Our custom yet simple interfaces convert complex manual steps into easy-to-manage data automation, saving you time and money while improving continuity of care and patient outcomes.

### **RELIABLE**

In addition to leading software, our dedicated in-house tech team helps with initial connection and provides proactive monitoring of internal and external data exchange, so your practice can focus on delivering patient care.
