PROCESS CLAIMS WITH TIME-SAVING FEATURES

LABORATORY BILLING SOFTWARE FOR THE BUSINESS SIDE OF YOUR LAB.

While pathology medical billing uses comparatively few codes compared to other fields like surgery and primary care, it retains a unique challenge to manage those that are unique to your field. Laboratory codes supported by AdvancedMD include a wide variety of code types: ICD-10, CPT, and HCPC. Most people with general billing experience won't be familiar with the ins and outs of billing for pathological services, so using the AdvancedMD billing platform makes even more sense if you are a pathology lab. We support the complete laboratory and pathology CPT code range, even those divided into smaller groupings, covering areas such as disease panels, drug assays, urinalysis, molecular pathology, genomic sequencing, multianalyte

assays with algorithmic analyses, immunology, transfusion medicine, microbiology, and surgical pathology.

Pathology laboratories are as unique as the patients and cases you work with, and each facility has different billing needs. Whether you are an independent lab, a physician office lab, or a clinical lab, AdvancedMD billing software has been custom designed just for you with the codes and workflows you need. We understand your needs, unique payor types, specific and uncommon procedures, and billing dynamics. Workflow optimization is critical for pathology labs because you require more supporting office staff than many other types of practices, such as surgical or primary care, due to

having to manage large influxes of mail and samples. No matter your size, operational makeup or context, we're here to help you capture maximum revenue.

You get laboratory revenue cycle management tools designed specifically to capture and process charges throughout the lifecycle of the claim. You can manage billing from a centralized location to keep all referring providers separate in your workflow and reporting. Claims and productivity tracking is a breeze with our claim center dashboards that give you real-time visibility into your A/R. Custom collection worklists can be assigned to technicians and billing staff with specific payer expertise. You can manage inbound and outbound faxes with our electronic fax solutions.

LEARN THE FEATURES OF OUR REVENUE CYCLE MANAGEMENT AND BILLING SOLUTIONS FOR LABORATORIES AND PATHOLOGY CLINICS.

LIMS CONFIGURABLE

We have integrations with most leading lab information management systems (LIMS) so as you track and manage samples, our diagnostic laboratory billing software automatically updates charges and billing information for a more seamless experience.

CLEARINGHOUSE

Post charges automatically and faster through our cloud-based interface. Our integrated, automated clearinghouse is connected to 1,800 of the nation's largest insurance carriers and can disclose insurance details without a manual search process.

CLAIMS CENTER

You are able to manage each claim from start to finish on a single laboratory billing software platform. Our processing and lab-focused features include ClaimInspector, eClaims and claims review.

CLAIM SCRUBBING

Each claim is inspected for 3.5 million edits, including CCI, HIPAA, LCD & carrier-specific requirements prior to submission. This automated process helps you achieve nearly 100% first-pass clean claims acceptance.

eREMITTANCE

Centralized payment processing takes care of receiving and matching payments, as well as building worklists to manage denials and unexpected payment amounts.

eELIGIBILITY

We offer flexible options to check patient insurance eligibility before processing the lab order. You can run daily or weekly batches as a report or on-demand checks with one click.
